INSTALLATION GUIDE
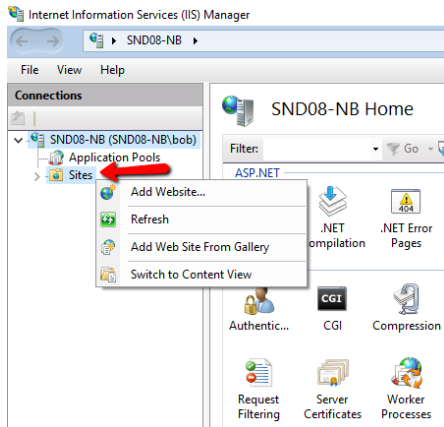

This is a guide to host Simple SEO Analyser web application to the IIS.

1. Open IIS Manager
2. On the left menu, Right-click on "Sites" and popup menu will appear. Select "Add Website…" as shown on following screenshot.

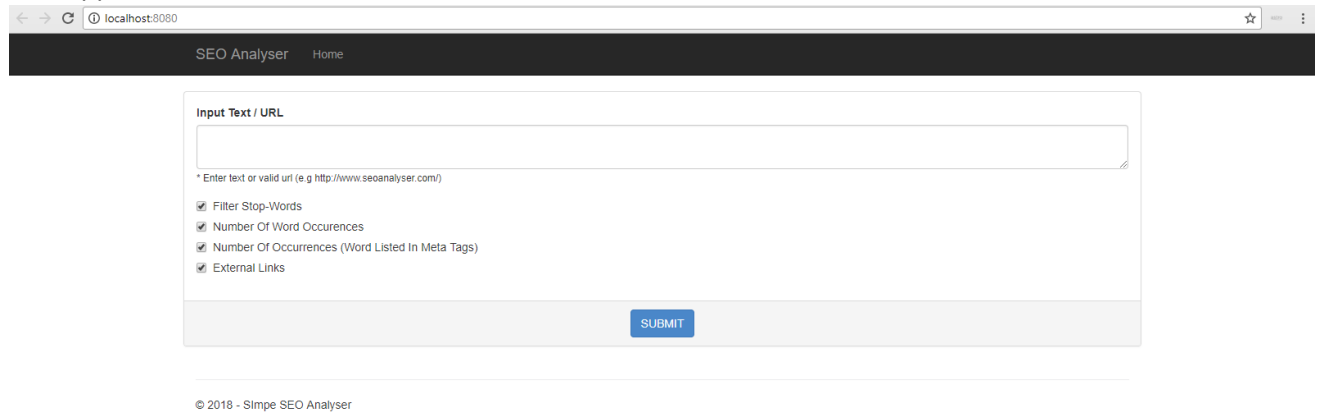

3. Fill in Site name as SimpleSEO and for Physical Path, browse through to the project application folder (..\SimpleSEOAnalyser\SimpleSEOAnalyser). Please make sure that you have appropriate permission for IIS in the project folder. (Please refer to **Add Permission to application folder**). Fill in unused port number (e.g 8080) in Port and click "OK". Leave other field as default. Sample completed form are shown below.
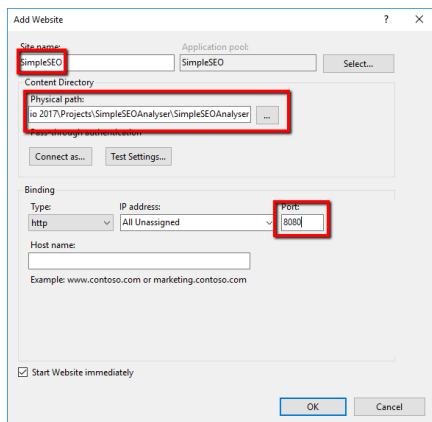

4. The newly created website will appear on the Sites website list.
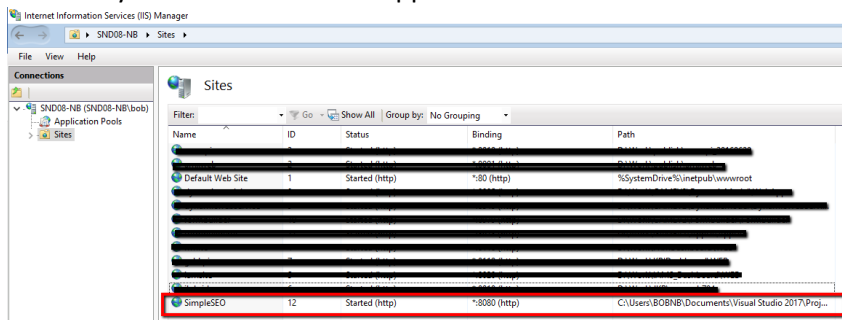

5. Open http://localhost:<port number>/ (e.g http://localhost:8080/) in your internet browser and you can see the web application as shown below.

Add Permission to application folder

To enable IIS to host the application, appropriate permission must be added in the folder.

1. Below screenshot shows the application solution folder. Right click on the application folder and select Properties.
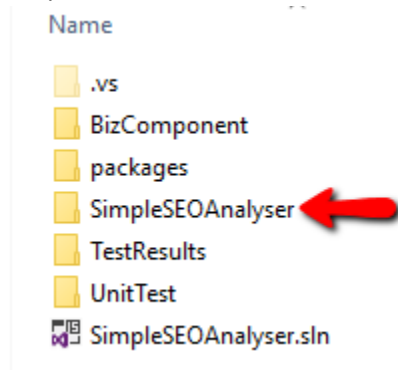

2. In the Security tab, if you still don't have IIS_IUSRS user on the list, you can add by clicking "Edit" button. Click button Add and select users or group form will appear.
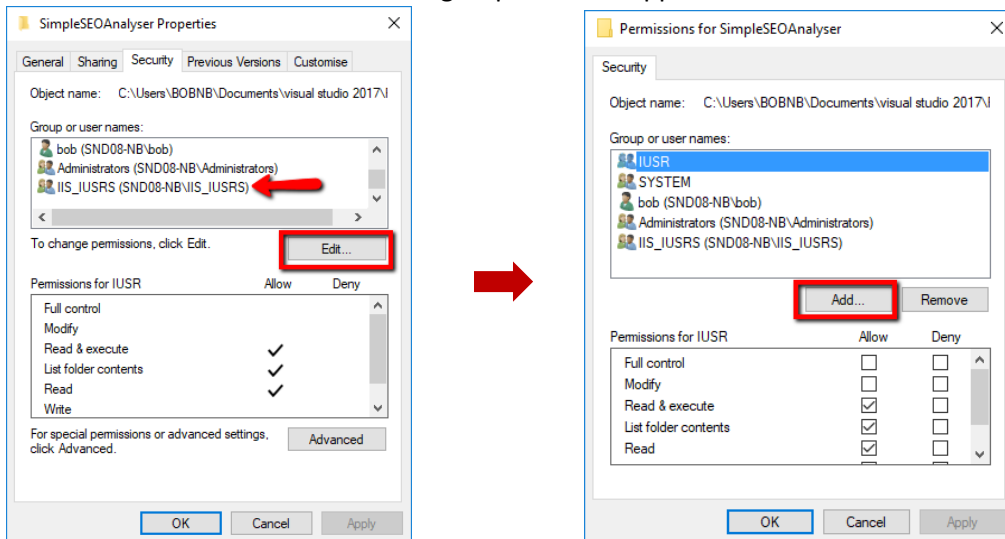

3. On the Select Users form, fill in **IIS_IUSRS** and click "OK" until you exit from the properties form. The folder now are ready to be hosted in IIS.
